

UNDERSTAND BIOGAS

New training for anybody interested in biogas science & tech

Have you always wondered how it is possible to produce biogas from organic waste? Or you have been in the biogas sector for a while and never really had a detailed training on the scientific part of biogas production? Then this is for you: learn from our nearly 15 years of biogas experience and know-how and take your biogas plans to the next level.

Who is this for?

This course is designed for those interested in learning more about biogas as cooking energy. It is your first step as biogas user or into the professional biogas sector, thus the basis for any biogas system owner, installer, or (B)energy distributor.

What is it about?

The training content is broken down into five chapters:

- biology of microorganisms in the biogas process
- necessary conditions for biogas production
- household biogas technologies
- use of biogas and bioslurry
- business opportunities with biogas

Why learning about biogas?

Biogas is an incredible renewable energy produced from organic waste (animal manure, food waste, agricultural waste). By using biogas as cooking fuel we can tackle deforestation, waste management and indoor air pollution, while creating green jobs and income opportunities. We can all make a difference in this world, biogas gives us this chance, join us!
